BSI ENGINEERING

Remote IT Management Tool Documentation

Name: Saif Bayyari.

To work on this project, you'll need to **install Python** and **the pip package manager.** The entire code for the tool is just in one python file called main.py.

Installing Python: https://www.python.org/downloads/

Installing Pip: https://pip.pypa.io/en/stable/installation/

After you install Python and pip, you will run pip commands on command prompt to install the following packages:

PySimpleGUI: the library used for creating the window, buttons, and graphics.

```
pip install pysimplegui
```

Pypsexec: the library used for processing windows commands remotely on other computers

```
pip install pypsexec
```
